

***Vision:CHC* Electronic Health Records**

DESIGNED BY CHC PHYSICIANS FOR CHC PHYSICIANS

Vision:CHC EHR feels natural to CHC physicians because it was designed by FQHC physicians. Its dynamic templates allow physicians to quickly create encounter notes during visits without diverting focus away from patients. Real-time query and tracking simplify chart reviews and aggregate reporting for Meaningful Use, PQRS, UDS and ACO. *Vision:CHC* Health Information Exchange solutions offer you the support, function, and flexibility needed for connectivity and Meaningful Use.

Most importantly, *Vision:CHC* EHR facilitates the delivery of quality care to a CHC's patients and to the larger community.

Our Value Proposition

Vision:CHC is the only EHR designed from the ground up to help clinicians do their job quickly and efficiently. Increased physician productivity gained through *Vision:CHC* translates into tangible economic support for your CHC.

In fact, increased physician productivity will provide your CHC with incremental cash revenue that is 3 times the cost of *Vision:CHC*.

Vision:CHC EHR collects and aggregates Meaningful Use data real-time for Core and Menu Item sets, as well as Clinical Quality Measures, UDS and PQRS. Therefore, CHC clinical and administrative staffs do not need to compile Meaningful Use, UDS and PQRS statistics and reports. The integral efficiency of *Vision:CHC* means a reduction of hundreds and even thousands of hours spent in administrative time, which can be devoted to patient care.

Vision:CHC Electronic Health Records

Core Features

- Fully-integrated with *Vision:CHC* Practice Management
- Real-time Meaningful Use Dashboard that shows compliance levels for individual patients and the entire health center
- Real-time aggregate UDS and PQRS outcomes reporting
- Customizable Quality Care reminder and tracking system
- Fast, easy documentation – all on one screen
- Certified for Meaningful Use and PQRS
- Integrated clinical and operational information
- Customizable disease management templates by specialty
- Workflow automation
- Customizable clinical protocols
- Electronic prescribing with drug-interaction and allergy alerts
- Patient portal
- Patient education literature

The screenshot displays the Vision:CHC EHR interface for a patient named Abraham Lincoln, a 66-year-old male. The dashboard shows a table of Standard Quality Measures (NQF/PQRI) with columns for Description, Value, and a status icon. The measures are categorized into Core, Diabetes, and Preventive Care groups. A right-hand pane shows a list of recent visits and a 'Current User' section for Matt Hahn. The interface includes a reporting date filter set to Jun 27 2011 and options for Export and Print.

Description	Value
NQF/PQRI Group - Core	
NQF 0013 Hypertension BP Management	56% (37/65)
NQF 0024a Child Weight Assesses - BMI	60% (3/5)
NQF 0024b Child Weight Assesses - Nutrition Counseling	40% (2/5)
NQF 0024c Child Weight Assesses - Phys. Act. Counseling	40% (2/5)
NQF 0028a Tobacco Use Assessment	90% (82/91)
NQF 0028b Tobacco Cessation Intervention	21% (6/28)
NQF 0038a Childhood Imms (Diphtheria)	0% (0/1)
NQF 0038b Childhood Imms (IPV)	0% (0/1)
